New! Fully-Automatic Recycle Guard Protects A/C Service Equipment from Debris, Sealant and Other Contaminants!

Atlanta, GA (February, 2013) – The Recycle Guard Sealant, Dye, and Lubricant Separator from AirSept is now available in an easy-to-use, fully-automatic, dual (High & Low Side) version.

The new Dual Automatic Recycle Guard (DARG) works during both the recover and recharge operation with no technician supervising when your machine switches. It automatically adjusts flow direction when service equipment switches from recover to recharge.

The technician can start the recovery process and walk away until the recharge process has completed.

Just one DARG unit protects your a/c service equipment from sealant, debris, and other contaminants. It works with both the High and Low Sides simultaneously.

The new DARG connects between the recovery machine and the vehicle. It traps debris and contaminants before they can enter and harm a/c service equipment.

Technicians cannot know in advance whether a vehicle contains metal chips, orange peel or other debris from component fabrication and installation, sealant, unapproved flush material or incorrect lubricant. These contaminants pass through and can clog tubing, solenoid valves, pressure gauges and other plumbing before reaching the recovery machine's built-in filter.

Recycle Guard helps protect a/c service equipment from harmful debris and sealant, and keeps the refrigerant supply contaminant-free.

Today, you can protect your recovery machine by using the new Dual Automatic Recycle Guard with every a/c service.
